## Direct eMIMS link in minfos<sup>®</sup> software now available

Australia's leading medical reference directory, MIMS and Australia's leading pharmacy management software, minfos<sup>®</sup>, are pleased to announce that pharmacies using the minfos<sup>®</sup> system can now easily access a link to **eMIMS** or **eMIMS for Pharmacy** whilst dispensing to patients.

MIMS Business Development Manager, Dinah Graham, says this feature provides pharmacists direct access to **eMIMS** or **eMIMS for Pharmacy** from their minfos<sup>®</sup> dispense module.

"minfos<sup>®</sup> pharmacy customers are now offered important dispensing information in an integrated format not previously available to them," says Dinah.

"The direct access from their dispense module will save pharmacists time and provide a wealth of dispensary information at the click of a button."

"As an added bonus for our eMIMS customers, any pharmacy that purchase the eMIMS link for the minfos<sup>®</sup> software prior to 5pm on December 18, 2008 will go into the draw for a chance to [win a 32 GB iPod Touch valued at \\$499.](#)"

**eMIMS for Pharmacy** offers an array of other resources to pharmacists, including drug/drug interactions (including herbal and complementary products), patient information handouts, support group listings and much more.

A simple online training program, providing more information on **eMIMS for Pharmacy**, how it can help pharmacists in their daily work and how the content can best be leveraged, is available on the MIMS website, [www.mims.com.au](http://www.mims.com.au).

MIMS has been publishing healthcare information for professionals for 45 years.
