

Safety Related Changes

In postmarketing experience, common cases of decreased bone density and osteoporosis have been reported in paediatric patients with severe chronic neutropenia (SCN) receiving chronic treatment with Neupogen **(filgrastim (rbe))**.

The patient should set a date to stop smoking. Champix **(varenicline)** dosing should start 1–2 weeks before this date. A flexible approach to quitting smoking may now be adopted. Patients can begin Champix dosing and then quit smoking between days 8 and 35 of treatment.

This list is a summary of only some of the changes that have occurred over the last month. Before prescribing, always refer to the full product information.
