

New Products - Imojev

Imojev (**Japanese encephalitis vaccine**) is a monovalent, live attenuated viral vaccine specific to the Japanese encephalitis virus. Imojev is indicated for prophylaxis of Japanese encephalitis caused by the Japanese encephalitis virus, in individuals from 12 months of age and over. Imojev is contraindicated in febrile, acute disease (postpone admin); congenital, acquired immune deficiency impairing cellular immunity eg chemotherapy, high systemic corticosteroid for 14 days (wait for at least 1 month after interruption of therapy) and HIV infection (symptomatic or asymptomatic when associated with impaired immune function). Imojev is also contraindicated in pregnancy and lactation. Imojev is available as a powder for injection with diluents in packs of 1's
