

New Products - Elaprase

Elaprase (**idursulfase**) is a purified form of the lysosomal enzyme, iduronate-2-sulfatase. Idursulfase is produced by recombinant DNA technology in a human cell line providing a human glycosylation profile. Elaprase is indicated for the long-term treatment of patients with Hunter syndrome (mucopolysaccharidosis II, MPS II). Elaprase is available as a concentrate for infusion (6 mg/3 mL) in a single use vial.

This list is a summary of only some of the changes that have occurred over the last month. Before prescribing, always refer to the full product information.
